

Week 4: Scoring & Lives System

Objectives

- Add a lives/wrong-guess limit
- Implement scoring with streak bonuses
- Track progression across puzzles

Task Breakdown

- Set max wrong guesses, deduct a life per wrong guess
- Award points per correct guess + streak bonus
- End game when lives hit 0
- Increase difficulty as score grows
- Integrate into Week 3's game loop

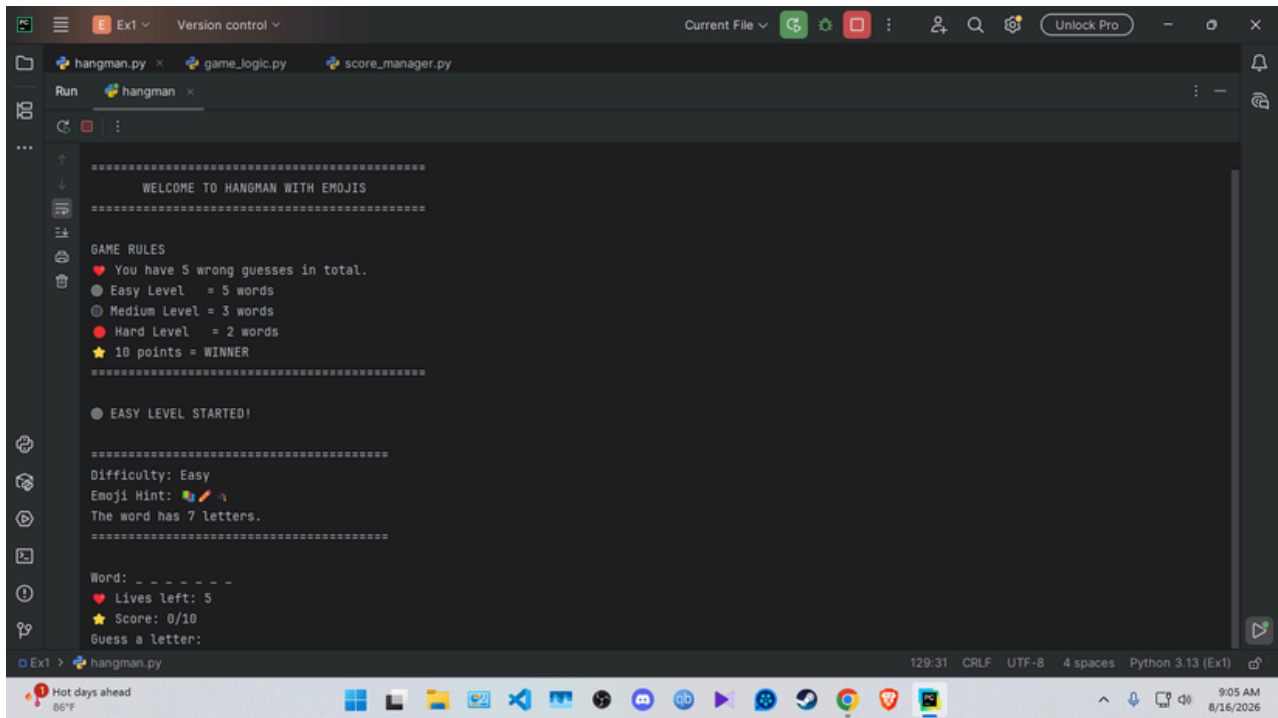

Deliverables

- CLI game with working lives + score system
- `score_manager.py`
- Short demo showing score/lives updating

Tools & Resources

- Python 3.11+
- VS Code/PyCharm
- Git

CLI game with working lives + score system

The screenshot shows a code editor with three files: `hangman.py`, `game_logic.py`, and `score_manager.py`. The `hangman.py` file is open, displaying the game's welcome message, rules, and the start of the 'EASY LEVEL'. The game logic and score management are handled by the other two files.

```
=====
WELCOME TO HANGMAN WITH EMOJIS
=====

GAME RULES
♥ You have 5 wrong guesses in total.
● Easy Level = 5 words
⊙ Medium Level = 3 words
● Hard Level = 2 words
★ 10 points = WINNER
=====

● EASY LEVEL STARTED!

=====
Difficulty: Easy
Emoji Hint: 🌈 🍌 🍷
The word has 7 letters.
=====

Word: _ _ _ _ _
♥ Lives left: 5
★ Score: 0/10
Guess a letter:
```

The status bar at the bottom indicates the file is `hangman.py`, the encoding is `UTF-8`, and the Python version is `3.13 (Ex1)`. The system tray shows the time as 9:05 AM on 8/16/2026.
