

Week 6: Main interface, panels

Objectives

- Convert the CLI game into a GUI app
- Build the main interface (puzzle display, input, lives/score panel)

Task Breakdown

- Choose Tkinter (simpler) or Pygame (more visual control)
- Build main window with title and layout
- Add puzzle panel: emojis, lives, score, hint button
- Add guess input box/buttons
- Connect GUI to Week 3–5 game logic

Deliverables

- Working GUI prototype (basic, unstyled)
- `main_gui.py`
- Interface screenshots for lecturer review

Tools & Resources

- Python 3.11+
- Tkinter (built-in)
- VS Code/PyCharm
- Git
