

Week 3: Core game logic (CLI)

Objectives

- Build the base game loop in the terminal
- Implement random puzzle selection
- Implement guess checking

Task Breakdown

- Load the puzzle list from Week 2's data file
- Pick a random unused puzzle each round
- Display emojis + prompt player for a guess
- Compare guess to answer, print correct/incorrect
- Loop until puzzles run out or player quits

Deliverables

- Working CLI version of Hangman with Emojis
- `game_logic.py`
- Test run screenshot/log for demo

Tools & Resources

- Python 3.11+
- VS Code/PyCharm
- Git

Core Game Logic (CLI Version) a simple terminal-based Hangman game
