

Week 5: Hint System & Difficulty

Objectives

- Add an optional hint feature
- Implement adaptive difficulty

Task Breakdown

- Hint reveals a letter/extra emoji
- Limit number of hints
- Adjust next puzzle's difficulty based on streak/score
- Test hint + difficulty scaling in CLI

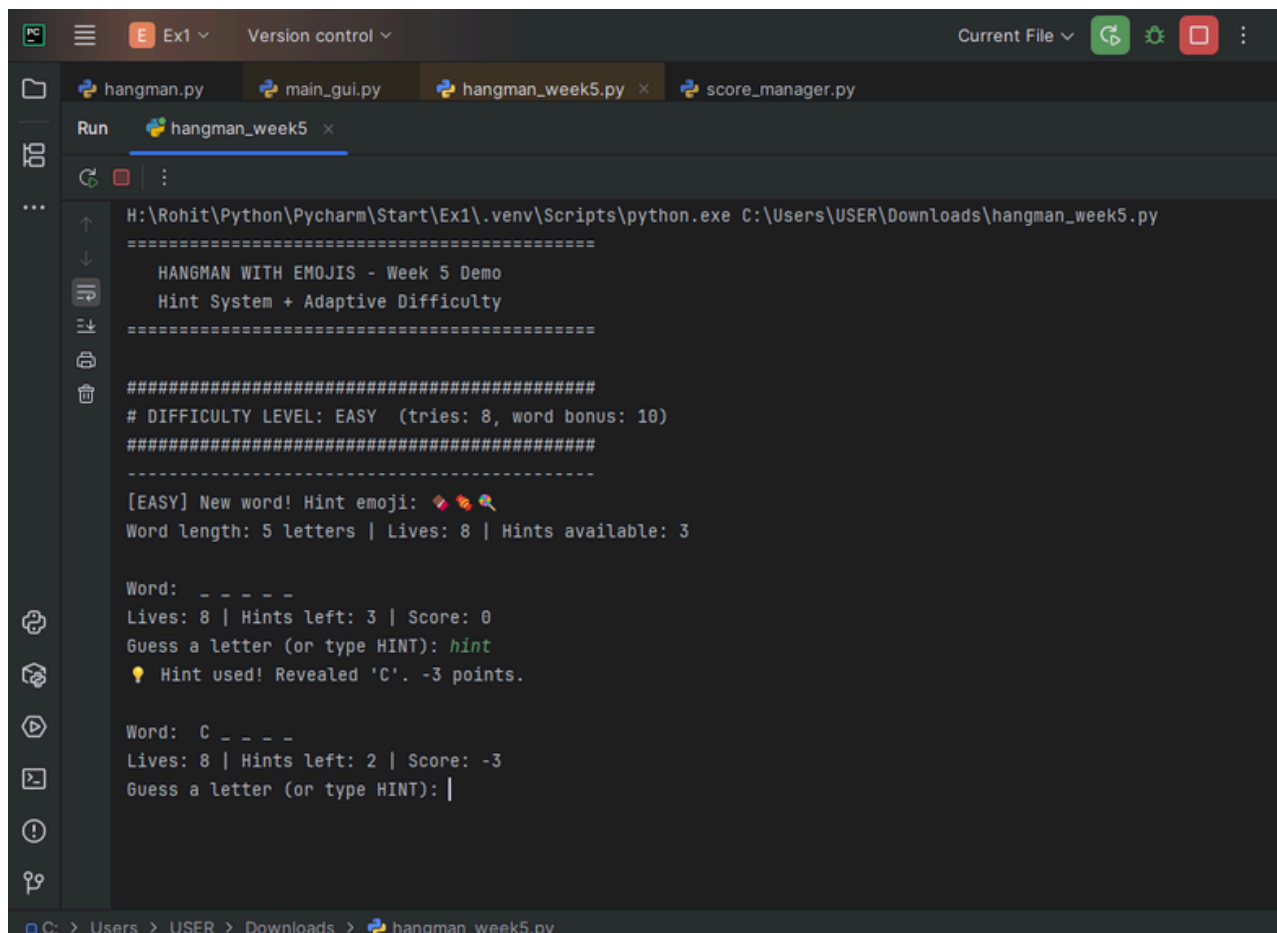

Deliverables

- Hint system integrated into game logic
- Adaptive difficulty logic documented in DESIGN.md
- CLI demo showing hint usage

Tools & Resources

- Python 3.11+
- VS Code/PyCharm
- Git

CLI demo showing hint usage:

The screenshot shows the PyCharm IDE interface with the 'Run' console open. The console output displays the execution of the 'hangman_week5.py' script. The game is titled 'HANGMAN WITH EMOJIS - Week 5 Demo' and features a 'Hint System + Adaptive Difficulty'. The difficulty level is set to 'EASY' with 8 tries and a word bonus of 10. A new word is generated with a hint emoji (🍌🍌🍌). The word length is 5 letters, and there are 8 lives and 3 hints available. The user is prompted to guess a letter or type 'HINT'. The user enters 'hint', and the hint is used, revealing the letter 'C' and deducting 3 points. The word is now 'C _ _ _ _'. The user is prompted to guess a letter or type 'HINT' again.

```
H:\Rohit\Python\Pycharm\Start\Ex1\.venv\Scripts\python.exe C:\Users\USER\Downloads\hangman_week5.py
