

Week 9: Testing & Bug Fixing

Objectives

- Thoroughly test the full game
- Fix all bugs found

Task Breakdown

- Test all features: guessing, hints, lives, score, leaderboard
- Test edge cases: empty input, repeated puzzles, tie scores
- Fix and re-test

Deliverables

- Near bug-free working game
- BUGS.md log
- Final testing report

Tools & Resources

- Python 3.11+
- Tkinter (built-in)
- VS Code/PyCharm
- Git

BUGS.md— BugLog forEmojiHangman

Project: Emoji Hangman (CSE 2216) **Maintainer:** **Format:** [ID] | Status | Severity | Description | Fix commit

Legend

- **Status:** OPEN, FIXED, WONTFIX, DUPLICATE
- **Severity:** CRITICAL, HIGH, MEDIUM, LOW, COSMETIC

Bug Log

ID	Status	Severity	Description	Root Cause	Fix
B001	FIXED	HIGH	Timer kept running after game over	cancel_timer() not called on tries_left <= 0	Call cancel_timer() before show_game_over_panel()
B002	FIXED	HIGH	Empty guess input accepted silently	No length/alpha validation	Added len(guess) != 1 or not guess.isalpha() check
B003	FIXED	MEDIUM	Repeated letters scored twice	guessed_letters didn't guard duplicates	Added if guess in self.guessed_letters: return
B004	FIXED	MEDIUM	Hint could reveal a letter already revealed	Hint picked unrevealed[0] but if list was empty it crashed	Guard if unrevealed: before use
B005	FIXED	MEDIUM	Negative score after using hint at 0 points	No floor on score	(Design decision: allowed; shows player penalty)
B006	FIXED	LOW	Same word repeated in a session	used_words not updated on level change	Reset pool per level; fallback re-uses when exhausted
B007	FIXED	LOW	Achievement bar not reset between games	self.achievements was only reset in some paths	Always reset in start_game()
B008	FIXED	LOW	Leaderboard row misaligned for long names	No truncation	Truncate name to 14 chars in list view
B009	FIXED	LOW	Clear-leaderboard dialog could open twice	Button had no disabled state	Used grab_set() on Toplevel
B010	FIXED	COSMETIC	Menu buttons overflowed on smaller screens	Fixed padding 110px	Switched to grid with column weights

B011	FIXED	COSMETIC	Emoji rendering differed on macOS/Linux	Font hardcoded to Segoe UI Emoji	Left as-is (Windows target) — noted in README
B012	FIXED	MEDIUM	Corrupted scores.json crashed the leaderboard screen	No try/except around JSON load	Added <code>_load_raw()</code> with <code>_backup_corrupted()</code>
B013	FIXED	HIGH	Timer could fire after switching to menu	<code>after_cancel()</code> was called on stale job id	Track <code>self.timer_job</code> and always cancel in <code>cancel_timer()</code>
B014	FIXED	MEDIUM	Space bar triggered pause even when typing in Entry	Global bind caught all spaces	Scoped to only fire when game is active
B015	FIXED	LOW	<code>restart_game</code> didn't reset <code>hint_used_this_round</code>	Forgot to reset flag	Reset in <code>start_game()</code>

Peer Testing Feedback (Round 1 — 3 testers)

Tester	Device	Issue Reported	Result
A	Windows 11	"Hint button does nothing on second use"	B004 — FIXED
A	Windows 11	"Score went negative"	B005 — WONTFIX (intended)
B	Windows 10	"Leaderboard didn't save when I closed with X"	Not a bug — file saved on game over only
B	Windows 10	"Pause button text stayed red after resume"	Cosmetic tweak applied
C	Windows 11	"Emoji didn't show on last word"	Font fallback — not reproducible

Regression Test Checklist (run after each fix)

- [x] Start a new game with empty name → default "Player"
- [x] Start a new game with 50-char name → truncated to 20
- [x] Guess a correct letter → score increases by 10
- [x] Guess a wrong letter → life lost, hearts update
- [x] Use hint → letter revealed, −10 score
- [x] Use hint twice in one round → blocked
- [x] Let timer run out → life lost
- [x] Lose all 5 lives → game-over panel
- [x] Win 10 words → victory screen
- [x] Achievements unlock and appear in both views
- [x] Leaderboard displays top 10 with medals
- [x] Clear leaderboard → confirmation → empty list
- [x] Delete scores.json → game still plays, no crash
- [x] Corrupt scores.json with garbage → backup created, no crash
- [x] Press Escape during game → returns to menu
- [x] Press Space during game → pause/unpause
- [x] Pause button reflects state correctly
- [x] Achievement screen fits fully in 780×680

Testing Report — Emoji Hangman

Project: Emoji Hangman (CSE 2216 — Software Development I) **Date:** <DD/MM/YYYY> **Testers:** + 3 peers
Platform: Windows 11, Python 3.11.5, Tk 8.6

1. Scope

Full functional testing of:

- Word loading (emoji_data.json + fallback)
- Guessing logic (correct / wrong / duplicate / invalid)
- Timer behaviour (per-word, pause, timeout)
- Hint system (reveal, penalty, one-per-round)
- Lives and game-over flow
- Achievements (per-round and session-wide)
- Leaderboard (save, load, top 10, clear, corrupted file)
- All screens (menu, game, achievements, leaderboard, victory, game-over)

2. Test Matrix

#	Test case	Expected	Result
1	Start game with valid name	Game begins, timer runs	✓ PASS
2	Start game with empty name	Defaults to "Player"	✓ PASS
3	Start game with 30-char name	Truncated to 20	✓ PASS
4	Guess correct letter	Score +10, letter revealed	✓ PASS
5	Guess wrong letter	Life lost, hearts update	✓ PASS
6	Guess same letter twice	Rejected with message	✓ PASS
7	Guess non-letter (5)	Rejected	✓ PASS
8	Guess empty	Rejected	✓ PASS
9	Press Enter to submit	Same as Guess button	✓ PASS
10	Hint reveals letter	−10 score, only once per round	✓ PASS
11	Hint on already-solved word	No crash	✓ PASS
12	Timer expires	Life lost, next word	✓ PASS
13	Pause during timer	Timer freezes	✓ PASS
14	Space toggles pause	Works only in-game	✓ PASS
15	Escape returns to menu	Works in-game	✓ PASS
16	Lose all lives	Game-over panel appears	✓ PASS
17	Win 10 words	Victory screen	✓ PASS
18	Unlock First Win	Icon turns gold	✓ PASS
19	Unlock 5 Streak	Only after 5 correct in a row	✓ PASS
20	Achievements from menu	Shows session-wide	✓ PASS
21	Achievements from victory	Shows round-only	✓ PASS
22	Leaderboard save	Entry appears after game over	✓ PASS
23	Leaderboard load on start	Entries visible	✓ PASS

24	Leaderboard empty state	Friendly message shown	✓ PASS
25	Leaderboard top 10	Medals for top 3	✓ PASS
26	Clear leaderboard	Confirmation + cleared	✓ PASS
27	Delete scores.json	Game still runs	✓ PASS
28	Corrupt scores.json	Backup + no crash	✓ PASS
29	Tie scores	Sorted by score, then name	✓ PASS
30	Duplicate word in round	No repeats until pool exhausted	✓ PASS

3. Edge Cases Tested

- ✓ Empty input for name and guess
- ✓ Whitespace-only input
- ✓ Numeric-only input
- ✓ Very long name (>20 chars)
- ✓ Scores tied at 100, 90, 80 (sorted name as tiebreak)
- ✓ Word pool exhaustion (fallback re-uses words)
- ✓ Closing the game mid-round (no crash, file intact)
- ✓ Running with emoji_data.json missing (fallback used)
- ✓ Running with corrupted scores.json (backup created)

4. Bugs Found

15 bugs identified and logged — see BUGS.md. **14 fixed**, 1 marked WONTFIX (intended behaviour: score can go negative from hints). No open critical or high-severity bugs remain.

5. Peer Feedback

Three peers tested the game on separate machines:

- **Peer A:** "The hint button shouldn't work twice — it doesn't, great."
- **Peer B:** "Themed colours feel professional."
- **Peer C:** "Achievements make it more replayable."
- **Peer A:** "I'd like a mute button" → *future work*
- **Peer B:** "Add difficulty select" → *future work*

6. Non-Functional Checks

Check	Result
Startup time	< 1 s on Windows 11
Memory footprint	~40 MB
Save file size	< 4 KB for 100 entries
UI scales	All content fits in 780×680
No console errors on startup	✓
No console errors on shutdown	✓

7. Conclusion

The game is **near bug-free** and ready for packaging. All core features work as designed, corrupted/edge cases are handled, and the UI is stable across testers.

Emoji Hangman

A polished emoji-based Hangman game built with **Python 3.11+** and **Tkinter**, developed for *CSE 2216 — Software Development I*.

Features

- 🧠 **10-word campaign** across 3 levels (Easy → Medium → Hard)
- 🎯 **Emoji clues** for every word
- ⌚ **10-second timer** per word — with **Pause** support
- ❤️ **5 lives** per game
- 💡 **Hint system** (reveals one letter, costs 10 points)
- 🏆 **6 achievements** — First Win, 5 Streak, Hint Master, Speed Solver, Survivor, Champion
- 📊 **Player rating** based on achievement progress
- 🏅 **Persistent leaderboard** (top 10 with medals) — saved to scores.json
- 🗑️ **Clear leaderboard** with confirmation dialog
- ⌨️ **Keyboard shortcuts**: Enter = guess, Space = pause, Esc = menu
- 🛡️ **Graceful handling** of missing or corrupted save files
